

I'm a woman, 56 years old and I'm living in South of France.

Since March 2004, I was suffering from eye floaters in both eyes. I had nearly 10 floaters per eye... From all sizes and filaments too.

It was horrible, I had terrible headaches, and nauseas, and had a serious photophobia (cannot go out without "NASA Sunglasses" thick as hell)...

It was impossible for me to read, and stare at things and use the computer...

I used to live locked in a dark room, my life didn't have a meaning any more.

After many tries in Switzerland, France, England and Austria, I was all alone with my eye floaters problem. There were no cure and no real solutions.

My husband found Dr Geller's website and the hope came back.

After a few weeks of thinking, and pain, I finally took the decision to try my last possibility to be healed and flew to Florida with my husband.

With only 7 laser interventions absolutely painless, Dr. Geller did a miracle. He nearly destroyed all my floaters (rate of 90%). The success of the operation was lowered because I have also a post-detachment of vitreous

All my troubles began to vanish just after the operations. Now they completely stopped... I waited 6 months after my operation to communicate this wonderful result to be sure that every thing is fine.

My eye floaters didn't come back again and I have the feeling my sight is even better now. Readings, Computer, Sun bathes, beaches are possible again.

I' will be forever thankful to the Doctor Geller, who's not only a master, but also a very simple and kind person.

At any moment, I feared for my eyes, I had always full confidence to the ability of Dr Geller

Ã such operation with a so significant success for only a few thousands dollars is really cheap...

THX VERY MUCH Dr. GELLER!!
